DETAILED ACTION

1. This Office Action is a response to the communication filed April 13, 2004. Claims 1-9 are presented for examination.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1-9 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-15 of U.S. Patent No. 6,598,129. Although the conflicting claims are not identical, they are not patentably distinct from each other because of the following. The instant claim 5 is a representative claim, which will be discussed below.

The patent claim 2 teaches each and every claimed limitation in the instant claim 5, in that the patent claim 2 teaches a storage system for a use with an open system computer and a mainframe computer, comprising: a first interface according to count key data (CKD) for receiving first data from the mainframe computer [instant claim 5, lines 3]; a disk device for storing the first data [instant claim 5, line 5]; and a second interface according to a fixed block architecture for receiving a request for the first data from the open system computer [instant claim 5, lines 4 and 6-7], and sending second data having the first data to the open system computer, wherein the second data is identified as track data by the mainframe

Art Unit: 2187

computer, wherein the request for the first data includes location information of the first data in the disk device, and wherein the location information was sent from the mainframe computer to the open system computer [claim 5, lines 8-10].

A later claim that is not patentably distinct from an earlier claim in a commonly owned patent is invalid for obvious-type double patenting. In re Berg, 140 F.3d 1428, 1431, 46 USPQ2d 1226, 1229 (Fed. Cir. 1998). A later patent claim is not patentably distinct from an earlier patent claim if the later claim is obvious over, or anticipated by, the earlier claim. In re Longi, 759 F.2d at 896, 225 USPQ at 651.

Accordingly, Claim 5 of the instant application is anticipated by the patent claim 2 in that claim 2 of the patent claim explicitly contain all the limitations of claim 5 of the instant application. Claim 5 of the instant application therefore is not patentably distinct from the earlier patent claim and such is unpatentable for obvious-type double patenting.
